Dear Maple Labs hiring team,

I am applying for the Senior Full Stack Developer role. At Northwind Logistics, I led a Next.js and TypeScript tracking app rebuild with a component library shared by three teams. I also replaced polling with Kafka events and GraphQL subscriptions, bringing shipment updates to under five seconds.

Your focus on accessible products matches my work at Brightpath Health, where I led a WCAG 2.1 AA audit and fixed more than 120 issues. I would bring that same care for usability and reliable delivery to Maple Labs.

I would welcome the opportunity to discuss your team and its products.

Kind regards,
Jordan Rivera
